

## Manual Test Plan For Iteration 3

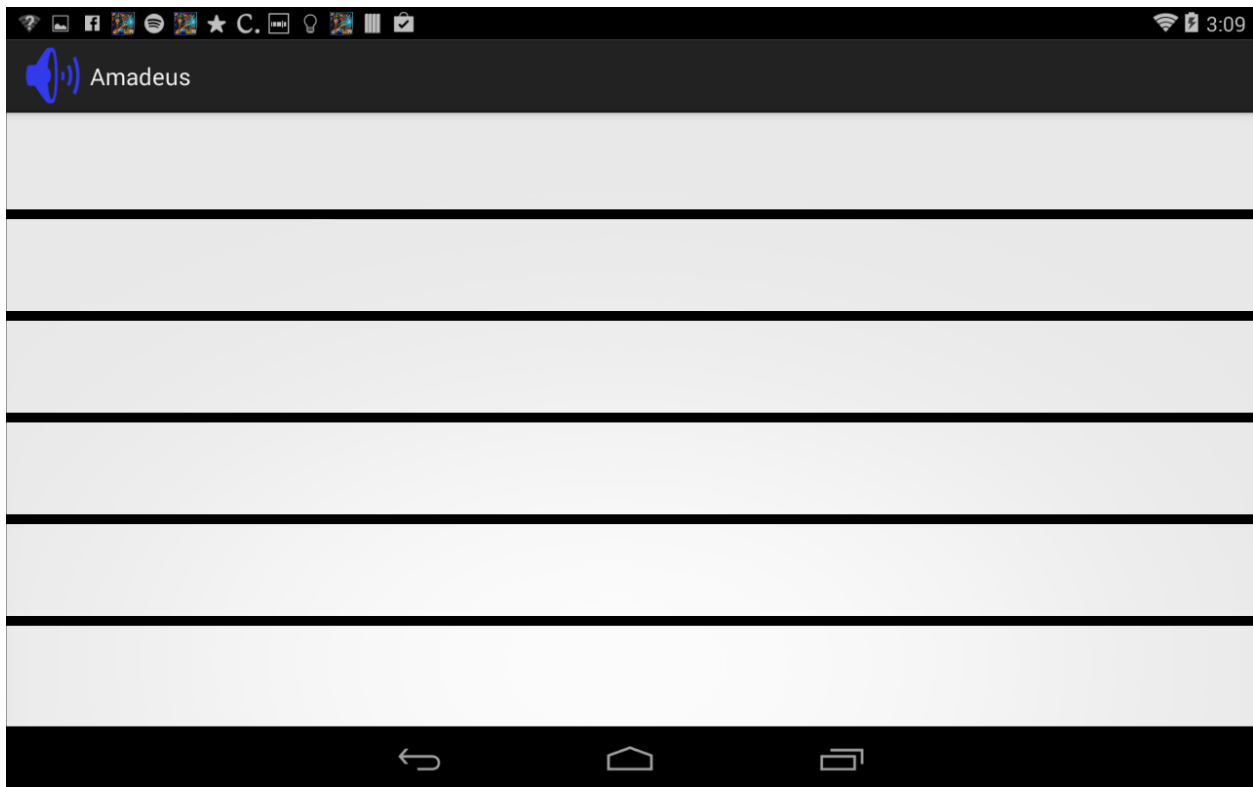

For this iteration, we implemented both a sheet music creator as well as a Pure Data analyzer that shows where the quarter note is represented on the bar. In order to test this, you can open up Amadeus and see the home screen as seen below:

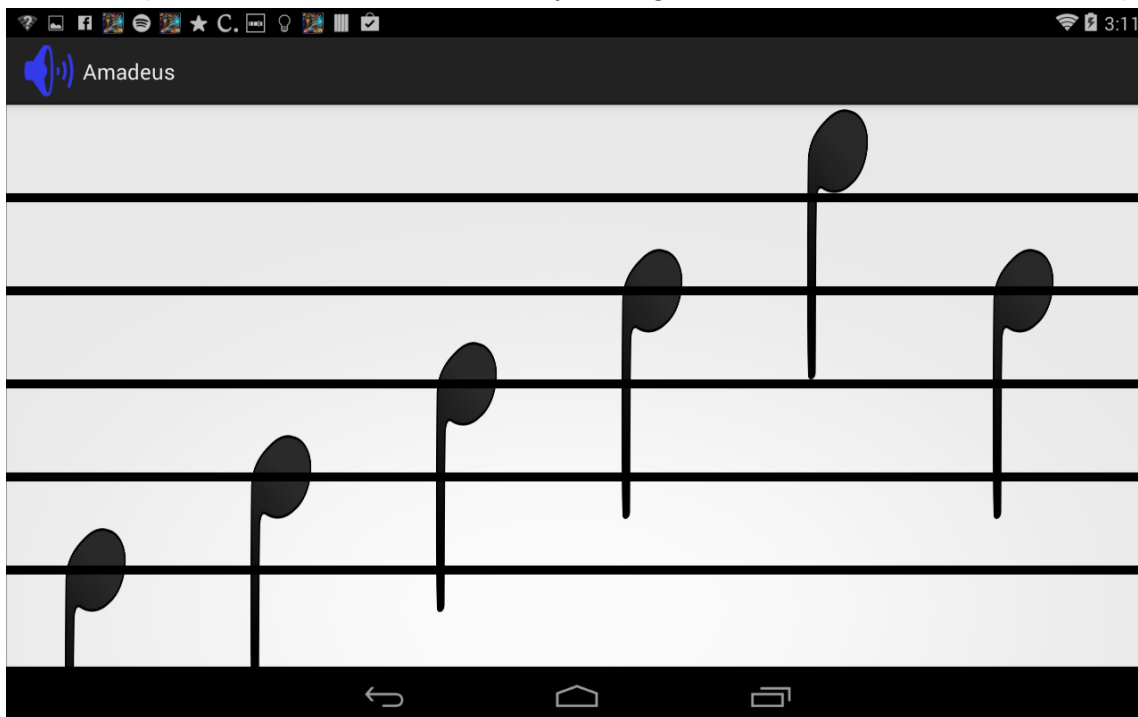

From here you should click on the Pure Data demo, to see how our frequency analyzer converts a frequency into a note. From here, you should open up Youtube or some video player that plays the A4 note, and let the device listen to the playback. The Pure Data Demo should analyze that note and show it displayed on the following line.

You can also try a Sheet Music demo. To do this, go to the home screen and select Sheet Music demo. This will display a blank sheet like so:

You can tap the screen and add notes. Try adding a note on a line and a note on a space.

You can also delete a note by tapping on it.
